

AI Ad Generation — End-to-End Process

URL-to-Campaign flow, CRM → Dev-Goads, published to Meta. As executed for **polluxa.com**.

Platform: **Polluxa CRM Ads** (Dev-Goads) · Ad account: **act_773958358563901** · Target channel: **Meta**

■ Pipeline step ■ Live Meta / ad-network call ■ Succeeded ■ Failed in this run ■ Bug fixed during run

Run notes. Meta was the target channel and published successfully (7/8 variants PAUSED; 2 Meta variants failed Meta-side validation on near-empty copy). The strategy engine also generated Google variants (CORE_NETWORKS rule), all of which failed on invalid Google credentials from the CRM token. The URL-parse step required raising the API JSON body limit to 10 MB. All objects were created PAUSED — no ad spend occurred.
